Dear Mr. Bianco,

I urge you to reject the fracked gas power plant proposed for Burrillville. Simply put, this power plant would take Rhode Island in the wrong direction.

There are serious concerns about local air and water pollution wherever a fracked gas power plant is built and operates, resulting in environmental and health concerns. If built, this plant would use thousands of gallons of Rhode Island's water sources and generate huge amounts of wastewater every single day. And it would promote fracking and accelerate climate change. Moreover, energy analysis and grid operators have proven that there isn't even a demand in the region for this power plant.

Burrillville residents deserve better than this fracked gas Invenergy plant. Rhode Islanders' future deserves better, too.

Protect our climate, our water, and the next generation of Rhode Islanders by rejecting Inenergy's Burrillville Power Plant proposal.

Sincerely,

Mary-Beth DeGrange  
686 Chopmist Hill Rd  
N Scituate RI, 02857-1052

Hi Todd;

Hard to believe it has been just shy of 4 years since the introduction of Invenergy to Burrillville and NW RI. Over this time the talking points have gone from it's a done deal to.. NO WAY, and for good reason.

The EFSB must vote down all permitting to the plant. It will cause irreparable economic and environmental harm to the area. It will be a massive ugly plant that will spew pollution for decades. It will hurt the economy of Glocester with all of the trucks going right through the historic district. It will be harmful to wildlife and biodiversity of the rich forested areas of Burrillville and it will cause medical issues to the people who will be in its path.

Invenergy is [NOT A GOOD NEIGHBOR \[ecori.org\]](#)-just ask people in Jessop, PA - where their newest "state of the art - "cleanest fracked gas power plant" is in operation. Pollution, discharges and now waste water in their septic. Is that the vision you want for NW RI? IF permitted noise ordinances will not be held up - the skyline will be forever changed and quality of life will disintegrate. IF permitted the plant will be antiquated from day one! And of course by all standards the plant is not needed. As the guardians of RI when it comes to siting power plants you must look at the future. Where will solar power be and wind power be in just 15 years, or less? Why burden RI with a polluting monstrosity at an outrageous price? We all know consumers will pay for this one way or another.

I URGE THE EFSB TO VOTE NO- AND NOT PERMIT THE SITING OF THE CLEAR RIVER CENTER IN BURRILLVILLE! For the good of NW RI, the state and all those who will suffer do to reliance on more fossil fuel extraction.

Sincerely;

Lauren Niedel-Gresh
